ZOLTAN RENDES

Senior Frontend Engineer | React | TypeScript | Frontend Architecture | Data Visualisation | Performance
Royston, Hertfordshire, UK | 07874742084 | rendes.zoltan@gmail.com | LinkedIn | Portfolio | GitHub

PROFESSIONAL SUMMARY

Senior frontend-focused software engineer with 8+ years of experience building scalable web applications, with deep React and TypeScript experience and a strong focus on frontend architecture, performance and maintainability. Experienced in turning complex financial, telemetry and operational data into clear user-facing workflows and visualisations. Comfortable working across frontend and backend boundaries with Python, APIs and legacy systems, and experienced in mentoring developers and helping teams establish effective engineering practices.

CORE EXPERTISE

Frontend	React, TypeScript, JavaScript, Redux, Redux-Saga, React Hooks, React Native, Ember
Architecture & UX	Frontend architecture, reusable component design, data-heavy interfaces, performance optimisation, responsive applications
Backend & Data	Python, Django, Flask, REST/API integration, PostgreSQL, SQLite
Quality & Delivery	Jest, React Testing Library, Cypress, Pytest, Git, GitHub Actions, CI/CD, Agile, mentoring and code review

PROFESSIONAL EXPERIENCE

Senior Software Engineer — Eclipse Veterinary Ltd | *Remote*
Jan 2023 – Present

I build the React frontend and supporting 4D backend functionality for Eclipse's Hospital Module, designed for equine veterinary clinics. Integrated with the existing practice management platform, the module brings admission, treatment, monitoring and discharge into a connected workflow, giving clinical teams a shared view of each patient's hospital stay.

The product supports treatment planning, medication and care instructions, task tracking and the recording of clinical observations. A central patient whiteboard helps staff see current information and outstanding care tasks, while browser and tablet access supports clinicians during their rounds. My work involves translating these detailed veterinary processes into practical interfaces, working closely with stakeholders and product teams.

Across the frontend and backend, I implement the functionality and integrations needed to keep hospital workflows connected to the wider system. Working across both layers allows me to investigate issues end to end and keep interface behaviour aligned with backend logic. I focus on clear component structure, data flow and integration boundaries so the module can grow while remaining maintainable.

Tech: React, JavaScript, TypeScript, 4D

Senior Frontend Engineer — Iotic Labs | *Remote*
Sep 2019 – 2022

I built React and TypeScript applications that helped users explore engineering telemetry, including live train data streamed through WebSockets. I integrated Google Maps to show train positions and developed configurable dashboard components presenting temperature, station information and other telemetry. These complementary views helped users explore different aspects of the data and focus on the information relevant to their needs.

To keep the applications responsive as data changed continuously, I identified unnecessary React rendering and restructured how updates reached the interface. I also developed reusable components and shared patterns that reduced duplication and made new features easier to build consistently.
Alongside the frontend work, I built Python services with Django and Flask and worked with backend engineers on APIs and reliable data flow.

Tech: React, TypeScript, Redux, React Testing Library, Jest, Python, Django, Flask, PostgreSQL, Cypress

Front-End Developer — Smart Pension Ltd | *London*
Aug 2018 – Sep 2019

I developed React and Ember features for Smart Pension's member-facing platform, helping people view and manage their workplace pensions. My work included pension balance visualisations and interfaces supporting contribution, investment and pension management workflows.
I also built the frontend experience for annual pension statements, presenting members' yearly pension information in a clear, readable format.

The focus was on making detailed financial information easier to understand and act on. Through balance charts, annual statements and clearly organised pension-related actions, I helped members understand their savings and navigate the options available to them.

Tech: React, Ember, Redux, TypeScript, Cypress

EARLIER EXPERIENCE

Software Developer — KM Software Systems | *Royston*
Oct 2014 – Jun 2018

- Designed and implemented enterprise software modules, integrations and reporting tools that improved access to operational business data.

Tech: Enterprise software, integrations, reporting

Software Engineer — EPAM Systems | *Budapest*
2013 – 2014

- Developed frontend tooling for stock-exchange connectivity and integrated market-data feeds into financial systems.

Tech: Delphi, JavaScript, financial/market data

Software Developer / Administrator — Igepa Paper Hungary Kft | *Hungary*
2008 – 2013

- Built internal web and e-commerce solutions alongside enterprise business systems and BI/reporting workflows.

Tech: JavaScript, PHP, Node.js, Microsoft Dynamics AX, X++, SSRS, OLAP, Analysis Services

Game Developer — Brainfactor Entertainment Kft | *Hungary*
2004 – 2008

- Worked on commercial 3D game titles and engine-level systems including particle effects, camera logic, 3D audio, GUI components and Lua-based gameplay/tooling workflows.

Tech: C++, Lua, OpenGL, DirectX, 3DS Max

EDUCATION

BSc Software Information Technologist — University of Nyíregyháza, Hungary (2008–2011)

ADDITIONAL INFORMATION

- Remote work experience since 2019 across distributed product and engineering teams.
- Experience across fintech, engineering telemetry, SaaS, enterprise software and legacy-system modernisation.
- Strong focus on clean frontend architecture, performance, maintainability.
